ABSTRACT

The Advanced Career Portal for Students and Employers is a web-based application developed to simplify and streamline the recruitment process between job seekers and employers. The system enables students to register, create profiles, upload resumes, search for jobs, and apply online through an interactive platform. Employers can post job openings, manage listings, review applicants, and shortlist or reject candidates efficiently. The application is built using Spring Boot, Spring MVC, Spring Data JPA, Thymeleaf, and MySQL/H2 Database, ensuring secure, scalable, and responsive performance. Role-based authentication is implemented using Spring Security to provide secure access for students, employers, and administrators. Additional features such as resume uploads, job filtering, application tracking, and notification support improve usability and enhance the recruitment workflow. This project offers a modern digital solution for placement and recruitment management in educational institutions and organizations.

Keywords: Job Portal, Recruitment System, Spring Boot, Career Management, Resume Upload, Applicant Tracking, Web Application, Spring Security, Thymeleaf, Student Placement Portal

Chapter 1

INTRODUCTION

1.1 Introduction

The Advanced Career Portal for Students Employers is a web-based recruitment platform developed to bridge the gap between job seekers and recruiters through a centralized digital system. The application enables students to create professional profiles, upload resumes, search for suitable job opportunities, and apply directly through the portal. Employers can register[1][4] post job vacancies, manage applications, and shortlist candidates efficiently. The system simplifies the recruitment process by automating job posting, application tracking, and candidate management. Built using modern web technologies, the portal provides a secure, user-friendly, and scalable environment for both students and employers.

1.2 Aim of the Project

The main aim of this project is to design and develop an efficient on-line career portal that connects students/job seekers with employers on a single platform. It aims to simplify the job application and recruitment process by providing features such as profile management, job search, resume upload, application tracking, and employer-side candidate management.

1.3 Scope of the Project

The scope of the Advanced Career Portal includes creating a complete recruitment management system for educational institutions, placement cells, and organizations. Students can register, maintain profiles, and apply for jobs, while employers can post vacancies and manage applicants. The platform can be extended in the future with features such as interview scheduling, skill assessment tests, AI-based job recommendations, and email/SMS notifications. It can be used by colleges, universities, and recruitment agencies for efficient hiring processes.

1.4 Framework

The system framework consists of layers such as the presentation layer, the application logic, and the database (Fig. 1.1).

Figure 1.1: FrameWork

Chapter 2

SURVEY OF SIMILAR APPLICATION IN MARKET

Several online job portals and recruitment platforms are widely used in the market, such as LinkedIn, Naukri, Indeed, and Monster. These platforms provide essential features including job search, online applications, resume uploads, recruiter access, and user-friendly interfaces that enhance the overall recruitment experience.

In addition to these, platforms like Glassdoor and Internshala offer advanced functionalities such as company reviews, salary insights, internship listings, and skill-based recommendations. These features help job seekers make informed decisions while improving recruitment efficiency for employers.

Furthermore, systems such as Freshersworld and Shine provide real-time job updates, application tracking, and personalized job recommendations, which significantly improve user engagement and reduce

manual effort in job searching. Many of these platforms also support mobile applications[3][4], enabling users to search and apply for jobs through smartphones and tablets seamlessly.

Most existing applications are primarily designed for large-scale public recruitment and corporate hiring. They commonly include features such as AI-based job matching, advanced analytics, interview scheduling, and integrated communication tools that support data-driven recruitment processes. These systems are highly scalable and capable of handling a large number of users simultaneously.

However, these platforms often lack specific customization for educational institutions or placement-oriented recruitment systems, where requirements such as student-only access, campus placement workflows, and institution-specific job postings are essential. They may also include complex enterprise-level features that are unnecessary for smaller-scale academic or institutional recruitment environments.

This gap highlights the need for a dedicated system tailored for student placement and institutional recruitment management. The proposed system focuses on simplicity, secure access, centralized job management, and efficient applicant tracking, making it more suitable for educational institutions and placement cells.

Chapter 3

FRAMEWORK DESCRIPTION

3.1 Frontend Implementation

3.1.1 Environment Setup

The frontend development environment is set up using modern web technologies such as HTML, CSS, and JavaScript. Bootstrap is used to create responsive and visually appealing user interfaces. Development tools such as Visual Studio Code and web browsers are used for coding and testing. Required frontend resources and libraries are integrated to improve design, responsiveness, and user interaction.

3.1.2 Structure of the Project

The project follows a modular structure to ensure scalability, maintainability, and separation of concerns:

- **templates:** Contains frontend pages such as Login, Registration, Home, Dashboard, Job Listings, and Application Forms.

- **static:** Stores static resources such as CSS, JavaScript, logos, and images used across the application.
- **controller:** Contains controller classes that handle user requests and page navigation.
- **service:** Includes business logic for authentication, job posting, and application processing.
- **repository:** Handles database operations using Spring Data JPA.
- **entity:** Contains entity classes such as User, Job, Application, and Role.
- **security:** Includes Spring Security configuration for secure authentication and authorization.
- **application.properties:** Stores database configuration, server settings, and application properties.
- **MainApplication.java:** Main entry point used to run the Spring Boot application.

3.1.3 Execution Procedure

The frontend application is rendered through the Spring Boot server when the project is executed. The project is started using the following command:

```
mvn spring-boot:run
```

Once the server is running, the application can be accessed through a web browser using the localhost URL, allowing users to interact with the system, browse job listings, manage profiles, and apply for available job opportunities.

3.2 Backend Implementation

The backend server is developed using Spring Boot. It handles client requests, processes business logic, and communicates with the database[2][3]. The server can be started using:

```
mvn spring-boot:run
```

Once running, it manages user authentication, job posting operations, application processing, and candidate management. APIs are tested using tools like Postman to ensure proper functionality (Fig. 3.1).

3.3 Database Implementation

3.3.1 Database Configuration

The database is configured using MySQL and connected to the Spring Boot application through the application.properties file. Database URL, username, password, and driver class name are specified for establish-

ing the connection.

Figure 3.1: Database Configuration

3.1.2 Schema Structure

The database schema is designed to manage users, employers, job postings, and job applications. Relationships are maintained between entities using primary keys and foreign keys. The schema ensures normalized data storage and proper linking between related records.

3.1.3 Tables created

The following tables are created in the database:

Users Table – Stores student, employer, and admin account details

Jobs Table – Stores job posting information created by employers

Applications Table – Stores job application details submitted by students

Roles Table – Stores role-based access information

Resume Table – Stores uploaded resume file paths/details Content

3.4 System Technology Stack Overview

The following table summarizes the technologies used in the development of the system:

Table 3.1: System Technology Stack

Component	Technology
Frontend	HTML5, CSS3, JavaScript, Bootstrap, Thymeleaf
Backend	Spring Boot, Spring MVC, Spring Security
Database	MySQL / H2 Database
ORM Framework	Spring Data JPA / Hibernate
Build Tool	Maven
Tools	Git, Postman, VS Code

Chapter 4

METHODOLOGIES

4.1 Project Architecture

The Advanced Career Portal follows a layered architecture to separate the application into different functional layers for better maintainability and scalability. The frontend layer handles user interaction through web pages developed using HTML, CSS, JavaScript, and Bootstrap. User requests are sent to the Spring Boot backend where controllers receive and process the requests. The service layer contains the business logic of the application. Repository classes interact with the MySQL database using Spring Data JPA to store and retrieve data. Spring Security manages authentication and role-based authorization for Students, Employers, and Admins

4.2 DataFlow Diagram

The Data Flow Diagram illustrates how data moves between users, the application, and the database. Students and Employers interact with the frontend interface to submit requests such as registration, login, job posting, and applications[9][10]. The backend processes these requests and stores/retrieves data from the database. The processed response is then returned to the user interface.

4.3 Module 1:User Management Module

This module manages registration, login, and profile maintenance for Students, Employers, and Admins. It handles secure authentication using Spring Security and role-based authorization. Users can create accounts, log in securely, update profiles, and manage personal details.

4.4 Module 2:Job Management Module

This module allows employers to create, update, and delete job postings. Employers can specify job title, description, salary, skills required, and eligibility criteria. Students can browse and search available jobs using filters such as category, location, and experience.

4.5 Module 3:Application Management Module

This module manages job applications submitted by students. Students can apply for jobs, upload resumes, and track application status. Employers can view applicants, shortlist candidates, or reject applications based on qualifications

Advantages of this Project

a) Centralized Recruitment Platform

Provides a single platform for students and employers to manage recruitment activities efficiently.

b) Role-Based Secure Access Ensures secure access control for Students, Employers, and Admins using Spring Security.

c) Efficient Application Tracking Allows students and employers to track job applications and recruitment status in real time.

Disadvantages

The Advanced Career Portal depends completely on internet connectivity, so users cannot access the system without a stable network connection. Since the application is web-based, server downtime or hosting issues may temporarily make the platform unavailable to all users. The current version of the project provides basic recruitment functionality, so advanced features such as AI-based job recommendations, real-time chat, and automated interview scheduling are not included

unless implemented in future enhancements. Additionally, the system requires regular maintenance and security updates to protect user data and ensure smooth performance.

Chapter 5

RESULTS AND DISCUSSIONS

The Advanced Career Portal for Students and Employers is developed as a comprehensive platform that streamlines recruitment and job application processes within educational institutions and organizations. The system integrates multiple functional modules to provide a seamless and efficient user experience for students, employers, and administrators.

5.1 System Modules and Features

The implemented system consists of the following key modules:

- **Landing Page Interface:** Provides an overview of the platform and navigation options for users.
- **User Authentication Module:** Handles secure registration, login, and role-based authentication for Students, Employers, and Admins.

- **Student Profile Management Module:** Allows students to create and update professional profiles and upload resumes.
- **Employer Dashboard:** Enables employers to manage job postings and applicant information.
- **Job Listing and Search Module:** Displays available job opportunities and supports filtering/search functionality.
- **Job Application Module:** Allows students to apply for jobs directly through the portal.
- **Application Tracking Module:** Enables students to monitor the status of submitted applications.
- **Candidate Management Module:** Allows employers to review, shortlist, or reject applicants.
- **Admin Dashboard:** Provides centralized control for managing users, jobs, and system activities.
- **Notification Module:** Sends alerts regarding job applications, shortlisting, and updates.
- **Reporting and Analytics Module:** Generates recruitment and placement reports for administrative use.
- **Database Layer:** Stores all system data including users, jobs, applications, and resume details.

5.2 System Performance and Discussion

The system follows a modular and layered architecture that ensures scalability, secure communication, and efficient handling of recruitment-related operations. It enables smooth interaction between students, employers, and administrators while maintaining data integrity and real-time updates throughout the recruitment process.

The performance of the system has been evaluated based on responsiveness, data handling capability, and user interaction efficiency. The application provides quick response times during job browsing, profile updates, and application submissions. The integration between the frontend and backend[6][4], ensures seamless data flow without noticeable delays.

The system effectively manages multiple user requests and maintains consistency in database operations. Proper validation mechanisms are implemented to prevent incorrect data entry and ensure reliability. The use of structured queries for storing and retrieving data enhances performance and accuracy.

In terms of usability, the interface is designed to be simple and intuitive, allowing users to easily navigate through features such as job searching, profile management, application submission, and applicant review. The administrator module provides efficient control over user

accounts, job postings, and system activities.

The system is flexible and can be further enhanced by integrating advanced features such as interview scheduling, AI-based job recommendations, and automated email notifications. It also provides a strong foundation for future expansion to support large-scale institutional recruitment systems.

The results demonstrate that the system significantly reduces manual effort, minimizes human errors, and improves overall recruitment efficiency. Automated processes such as profile management, application tracking, and candidate filtering contribute to better system performance. Overall, the application provides a reliable, scalable, and user-friendly solution for managing student recruitment and placement activities.

Table 5.1: Example Comparison

Applications	Advantages
Existing Job Portal	Basic Job Search
LinkedIn Jobs	Professional Networking
Naukri Portal	Resume Based Recommendations
Indeed	Large Job Listings Database

5.3 System Interface Visualizations

5.3.1 Landing Page Interface

The landing page (Fig. 5.1) provides an overview of the recruitment portal and introduces users to the platform. It presents an interactive interface with career-related information, navigation menus, and quick access options for job seekers to explore available job opportunities.

Figure 5.1: Home Page of Advanced Career Portal

5.3.2 Job Listings Interface

The job listings module (Fig. 5.2) displays all available job opportunities along with location, salary, experience, and employment type. It helps users efficiently browse and select jobs based on their preferences.

Figure 5.2: Selected Job Details and Rules Regulations Page

5.3.3 Job Details Interface

The job details module (Fig. 5.3) presents complete information about the selected job including salary, timings, and workplace rules or regulations. It allows applicants to review job-specific requirements before proceeding with the application.

Figure 5.3: Job Listings and Location-Based Career Opportunities

5.3.4 OTP Verification Module

The OTP verification module (Fig. 5.4) allows users to verify their phone number securely before submitting an application. It ensures secure user authentication and prevents unauthorized submissions.

The screenshot shows the DMartIndia website's OTP verification page. At the top, there is a navigation bar with the DMartIndia logo, links for Home and Careers, and an Apply Now button. The main content area features a central white card with a green shield icon at the top. Below the icon, the text reads "Verify Your Number" and "We've sent an OTP to +91 9704941634". There are four empty input boxes for the OTP digits. A large green button labeled "Verify & Submit" is positioned below the input boxes. At the bottom of the card, there is a link that says "Didn't receive code? Resend". A green chat bubble icon is visible in the bottom right corner of the page.

Figure 5.4: OTP Verification for Candidate Authentication

5.3.5 Application Form Interface

The application form module (Fig. 5.5) collects applicant information required for job submission. It captures details such as full name, age, phone number, and resume upload. Validation checks ensure that all mandatory fields are completed correctly before proceeding.

The screenshot shows the DMartIndia website's 'Application Form' submission confirmation page. The header includes the DMartIndia logo, 'Home', 'Careers', and an 'Apply Now' button. The form fields are: 'Full Name' (John Doe), 'Age' (e.g. 25), 'Phone Number' (+91 9876543210), and 'Resume Upload' (with a dashed box and an 'Upload a file' button). Below the form are 'Cancel' and 'Send OTP' buttons. A green circular icon with a checkmark is visible in the bottom right corner.

Figure 5.5: Successful Job Application Submission Confirmation

5.3.6 Application Success Confirmation

The application confirmation module (Fig. 5.6) displays a success message after the job application is submitted successfully. It confirms that the application has been received and provides notification details for further recruitment communication.

Figure 5.6: Application Successful

Chapter 6

CONCLUSION AND FUTURE ENHANCEMENTS

6.1 Conclusion

The Advanced Career Portal for Students and Employers has been successfully designed and implemented to provide an efficient and reliable solution for managing recruitment and job application[3][6] processes. The system replaces traditional manual recruitment methods with a digital platform, thereby reducing time consumption, minimizing errors, and improving overall efficiency.

The application offers a user-friendly interface that allows students to easily browse job opportunities, manage profiles, upload resumes, and apply for positions in a structured manner. Employers can efficiently post job vacancies, review applicants, and manage recruitment workflows.

The integration of frontend, backend, and database components en-

sures smooth communication, real-time data updates, and secure handling of user information. The modular architecture of the system enhances scalability and makes it easier to maintain and upgrade in the future.

Overall, the system demonstrates how modern web technologies can be effectively utilized to simplify recruitment management processes, improve user experience, and provide a reliable and organized solution for placement and hiring activities.

6.2 Future Enhancements

While the current implementation provides a strong foundation, the following enhancements can further improve the system:

- **Interview Scheduling Module:** Integration of automated interview scheduling for shortlisted candidates.
- **Email and SMS Notifications:** Sending automated alerts for application updates and interview notifications.
- **AI-Based Job Recommendation:** Recommending suitable jobs based on candidate skills and profiles.
- **Skill Assessment Tests:** Conducting online technical or aptitude assessments for applicants.

- **Mobile Application:** Developing a mobile application for easier access and real-time notifications.
- **Advanced Analytics Dashboard:** Providing recruitment statistics and applicant insights for administrators.
- **Resume Parser Integration:** Automatically extracting applicant details from uploaded resumes.

1. LinkedIn Jobs

Link: <https://www.linkedin.com/jobs>

Review Comment: Popular professional recruitment platform with networking features, but can be complex for freshers.

2. Naukri.com

Link: <https://www.naukri.com>

Review Comment: Widely used in India, offers large job database but contains high competition.

3. Indeed

Link: <https://www.indeed.com>

Review Comment: Simple and user-friendly interface with broad job listings.

CHAPTER 7

ADDRESSING COMPLEX ENGINEERING PROBLEM AND SDG

7.1 Mapping of Project to Complex Engineering Problem (CEP)

Level	Attribute	Characteristics	WKs	Justification
WP1	Depth of Knowledge	Requires in-depth engineering knowledge	WK3, WK4, WK5, WK6	Requires Spring Boot, database management, authentication, and recruitment workflow processing for secure system development.
WP2	Conflicting Requirements	Technical and non-technical conflicts	WK4, WK5, WK6	Balances security, usability, performance, and efficient recruitment management.
WP3	Depth of Analysis	Analytical and design thinking	WK3, WK4, WK5	System design and recruitment process analysis for job application management.
WP4	Familiarity	Partially new problems	WK4, WK8	OTP verification and role-based recruitment management introduce modern challenges.
WP5	Applicable Codes	Limited standard solutions	WK6	Custom recruitment workflow and secure authentication implementation.
WP6	Stakeholder Needs	Multiple stakeholders involved	WK5, WK6, WK7	Supports students, employers, and administrators efficiently.
WP7	Interdependence	System-level integration	WK3, WK5, WK6	Integrates frontend, backend, database, and security modules.

Table 7.1: Mapping of Project to Complex Engineering Problem (CEP)

7.1 Mapping of the Project to Complex Engineering Activities (CEA)

[1]

EA No.	Attribute	Characteristics	Justification
EA1	Range of Resources	Use of diverse technologies	Spring Boot, MySQL, OTP APIs, frontend technologies, and security modules.
EA2	Level of Interactions	Complex module interactions	Job posting, application tracking, resume upload, and authentication integration.
EA3	Innovation	Modern technologies	OTP verification and role-based recruitment management system.
EA4	Societal Impact	Impact on users	Improves placement and recruitment efficiency for institutions and organizations.
EA5	Familiarity	Beyond standard practice	Integration of recruitment management with secure online workflows.

Table 7.2: Mapping of Project to Complex Engineering Activities (CEA)

7.2 SDG Mapping

SDG No.	SDG Title	Relevance to the Project
SDG 4	Quality Education	Supports student career development and placement opportunities.
SDG 8	Decent Work and Economic Growth	Improves employment opportunities and recruitment efficiency.
SDG 9	Industry, Innovation and Infrastructure	Promotes digital transformation using secure web technologies.
SDG 16	Peace, Justice and Strong Institutions	Provides secure authentication and reliable recruitment management.
